Guide Written By Me:

Project Completion Time: 35 minutes

Included:

- Tabletop (Part A)
- Center leg (Part B)
- Standing legs (Part C) Already connected

- 2 Hooks (Part D)

1. Remove each part from the box and remove all paper and plastic.
2. Start with Part C first, and center it on the floor with the legs standing as if the table was already assembled.
3. Take the center leg, Part B, and attach it to Part B. Once assembled properly, you will hear it click.
4. Align the tabletop, Part A, with Part B and screw it on until it is tightly secured.
5. Screw the 2 hooks, Part D) into the 2 holes that are located underneath the tabletop.
6. Lastly, be sure that your table does not wobble and is even. If the table wobbles, you will need to take the table apart and reassemble.
